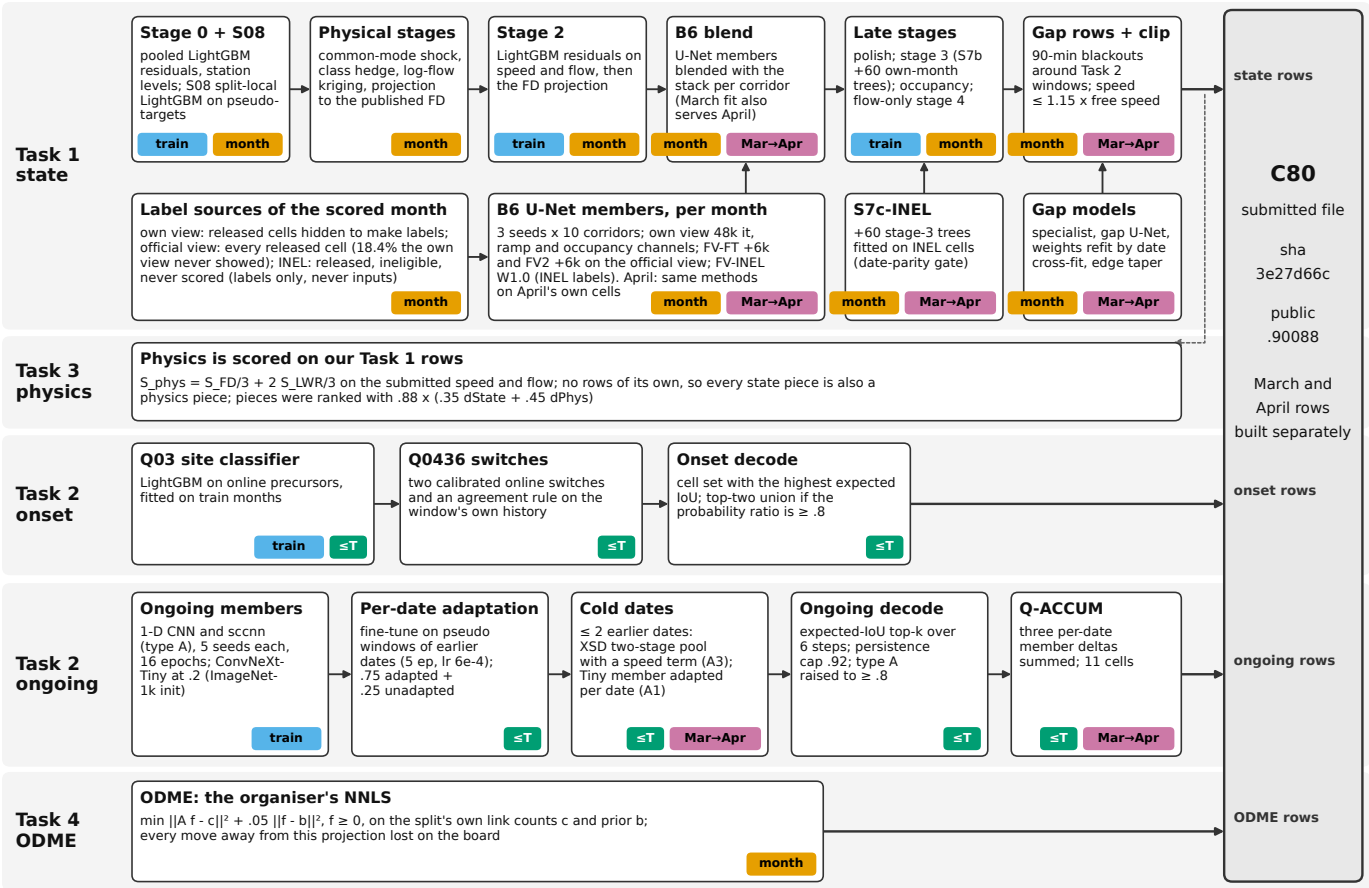
Each scored month is built alone from its own released view; Tasks 1, 3 and 4 are offline, Task 2 is online. Chips under a block = the data it may read.



train: train months (June 2030 to February 2031)

month: released cells of the scored month, all dates (offline Tasks 1, 3, 4 only)

≤T: data stamped <= T on the window's date, earlier dates of the month, train (online Task 2)

Mar→Apr: March released data or a March board read of a METHOD, used for April rows (declared)
